

ACI-CRSI Adhesive Anchor Installation Certification Program

Changes to the 2011 ACI 318 and 2012 IBC codes require adhesive anchors oriented in a horizontal to overhead position or under sustained tension load to be installed by a certified installer. Aggregate Ready Mix Association of Minnesota (ARM) offers the ACI-CRSI Adhesive Anchor Installation Certification Program for your employees.

An Adhesive Anchor Installer is an individual who has demonstrated the ability to read, comprehend, and execute instructions to properly install adhesive anchors in concrete. The Adhesive Anchor Installer must also demonstrate possession of the knowledge to properly assess ambient conditions, concrete condition, materials, equipment, and tools for installing adhesive anchors and determine when it is appropriate to proceed with installation of an adhesive anchor or when additional guidance from a supervisor/foreman/project engineer is needed.

The two-day program includes:

- **Day 1** A training course to cover the exam's essential information, including classroom review in the morning and a hands-on practice session in the afternoon.
- **Day 2** The certification examination includes two parts: Part One is a 90-minute written examination consisting of 75 multiple-choice questions; Part Two is a performance examination consisting of installing an adhesive anchor in the downward position and injecting adhesive in the overhead position. Applicants must pass each part to obtain certification.

Exam results may not be available from ACI until a month after the exam – it's important to plan your training session accordingly.

- **Prerequisites:** None
- **Fees:** Dependent on number of students per class; 10 student minimum for class to be held
