

Concrete Parking Lots

Concrete has stood the test of time better than any other leading building material.

Concrete parking lots are strong, durable, cool, easy to construct, and have tremendous curb appeal. **People will notice the clean, professional look of your concrete parking lot.**

Economic benefits

- Concrete is no longer more expensive than asphalt. Oil prices, a primary component of asphalt, rose significantly in the past eight years.
- Parking lot maintenance costs are minimal when compared to asphalt. Your concrete lot can last 25 years or more with only minor touch ups and care.

- You can save time and reduce labor when the entire project is paved with concrete because you'll be using it for curbs and gutters anyway.
- You can save on energy costs because concrete is brighter and reflects light better. You won't need as many lights and the ones you have will do the job better. People will feel safer.
- Concrete parking lots stay cooler, which reduces the "heat island" affect so the inside of your building stays cooler.

Many companies, like Dollar General, Kwik Trip and Walmart, pave their parking lots with concrete.

If concrete makes sense for companies that build and manage hundreds of parking lots, doesn't it make sense for you, too?

Your company projects a professional and polished image with a concrete parking lot. You'll create a great first impression that'll last for years. And you'll be proud of your long-lasting investment.
